Morse light safety note — morsecoder.us

Light mode on MorseCoder flashes the whole screen. Skip it if anyone in the room is sensitive to flashing lights, including people with photosensitive epilepsy.

Flashlight games stay at table height. Never aim a light at faces, drivers, or aircraft.

SOS is a real distress signal. Do not send it as a joke on the air or toward traffic.

Prefer the on-screen chart and headphone audio when a group includes younger students.
